FINANCIAL SERVICES RECORD

- Edward Jones. Executive relationships built at Red Hat and carried forward through Gigamon, with CIO and VP level sponsors held across two employers and several years.
- Mastercard. Same pattern. Won at Red Hat, sponsors maintained and sold again at Gigamon, with joint work through the WWT partnership.
- Alliant Credit Union. Closed this year at Analyst1. The evaluation moved through security leadership, then technology, then finance, and nothing was signed until the risk team finished its assessment.
- Arvest Bank. Net-new regional bank logo in the same first year.
- Paycom. Net-new logo at Couchbase during the IPO year, selling into a payroll and human capital technology environment.

What regulated buyers add to a cycle. Vendor risk questionnaires, third party security assessments, business continuity and exit language, retention and audit requirements, legal redlines and committee approval. I plan for each of those by name in the first month and run them as parallel tracks.

RECORDS, RETENTION AND COMPLIANCE ADJACENCY

Alfresco, 2014 to 2017. I sold enterprise content and records management with process automation attached. The purchase was rarely about storage. It was about retention schedules, audit trails, defensible disposition and being able to answer an outside question with evidence. Buyers included legal, compliance and operations owners alongside IT, and implementation services came with nearly every agreement.

Since 2022 I have worked the risk side of the same house. Cloudflare on identity based access and policy across users and devices. Gigamon on detection coverage and what an organization can prove happened on its network. Analyst1 on threat intelligence and agent driven workflows, where the recurring question is what a system reached, how that was authorized and what an auditor can reconstruct later.

ENTERPRISE CYCLES AND THE EXECUTIVE ROOM

Centene, Red Hat. A \$5M annual agreement including professional services, taken from an incumbent. Engineering validated the platform, the CFO organization examined every line of the business case, and sourcing and legal ran in parallel from early in the cycle.

Discovery. I walk the current process step by step with the customer. Who touches it, what it costs when it fails, and how anyone finds out. The number we agree on there is the number the business case uses.

Executive presentations. The operating owner needs the workflow fixed. The executive needs one sentence they can repeat to a board or a committee. I write both before the meeting.

Negotiation. Before I ever carried a quota I worked in corporate procurement, so I know how a vendor package is scored and which clauses draw a redline. Pricing structure goes on the table before sourcing asks for it.

Forecast. MEDDPICC current in CRM and weekly review of stage conversion and coverage against the number. At Gigamon that meant \$5M of qualified pipeline kept clean under Clari against a \$750K target.

COMPETITIVE SELLING

- Centene came off an incumbent with the relationship already in place and the renewal already budgeted.
- At Red Hat I sold paid subscription and support against freely available alternatives at every layer of the stack, which is the hardest version of a competitive argument.
- At Analyst1 I built the competitive intelligence on every vendor in the category myself and turned it into positioning the team uses in live cycles.
- At Cloudflare I sold consolidation against stacked point products, framed on what the customer retires and stops staffing.

PIPELINE AND FULL CYCLE OWNERSHIP

Every territory I have carried started empty. Cloudflare gave me 35 named accounts and no inbound, which turned into \$4M of funnel and 115 percent of a \$1M number. Analyst1 gave me thirteen states and no list, which turned into five net-new enterprise logos in year one. Lead generation, qualification, demonstration, evaluation, negotiation and close are all mine, with sales engineering and services brought in when the conversation earns it.

ATTAINMENT RECORD

- Red Hat. Over plan three years running, 160 then 128 then 137 percent, against \$7M, \$5M and \$3.5M.
- Alfresco. Team target of \$4M closed at 146 percent, with \$1.5M of it on my own name.
- Couchbase. 135 percent of quota on new business only.
- Gigamon. 125 percent of a \$750K regional number.
- Cloudflare. 115 percent of \$1M with the whole funnel built from cold outreach.
- President's Club at three employers across sixteen years.

EDUCATION AND CREDENTIALS

University of Arkansas, Sam M. Walton College of Business. MBA and BSBA. AWS Certified AI Practitioner. Twelve formal sales methodology programs including MEDDPICC and Challenger.
